

All the Facts

for Teaching Fact Families

Forms **A** through **L**

Addition

Subtraction

Multiplication

Division

FRENCH FORMAT

All the **A** and **B** Forms are intended as an *instructional tool* and should NOT be used for evaluation. They are available in an 11 x 17 format as well as the following 8.5 x 11 format. The 11 x 17 format makes it easier to connect the **Fact Families**. [\[Click icon for 11 x 17 format\]](#)

Form **C** Addition should be printed back-to-back with Form **C** Subtraction.

Form **C** Multiplication and Form **C** Division should be copied back-to-back as well.

The same is true for Forms **D** through **L**.

Forms **C** through **L** Addition and Subtraction can be used for instruction by circling the pattern being demonstrated:

- Friendly Facts
- Adding or Subtracting 9
- Adding or Subtracting 5
- Adding or Subtracting 8
- Sums less than or equal to 10 and Differences where there is no regrouping (e.g. $10 -$, $9 -$, $8 - \dots$)
- Doubles
- Doubles plus or minus 1
- Differences of 1
- Adding or Subtracting 0 or 1

Forms **C** through **L** **Multiplication** and **Division** can be used for instruction by circling the pattern being demonstrated:

- **Multiplying** or **Dividing** by **10**
- **Connecting** the fives to the tens **through halving and doubling**
- The **pattern of multiplying** by **0** (there is no fact family for dividing by **0** as the operation is undefined)
- The **pattern of multiplying** and **dividing** by **1**
- The **pattern of doubling** and **halving** (multiplying and dividing by **2**)
- **Extending** the **pattern of doubling** and **halving** to include **fours** and **eights** (doubles plus or minus **1**)
- **Multiplying** and **Dividing** by **9** using the '**Make a Simpler Pattern**' strategy (**7** x **9** is too hard so try **7** x **10** and then visualize seven nines so subtract seven to get the product)
- **Picking up** any **threes** and **sevens** not accounted for and **using doubling strategies** or '**Breaking Up the Number**' (**3** x **7** is half of **6** x **7**, **7** x **7** is **6** x **7** + **7** or **5** x **7** + **2** x **7**)

The **main strategies** when using the **All the Facts** sheets as an instructional tool are:

- **Develop one of the patterns** above with the students.
- **Circle All the Facts** (teachers can circle the pattern to be studied before copying – this makes it faster to find the questions but does not develop the scanning skills needed for the next step).
- Advise the students to **do the circled questions first**. Have them ask for help if needed.
- If help is not available have them **do the easy questions** (zeros, ones, etc. until help is available).
- **Leave out questions** if the answer is not known to them relatively automatically.
- **Use any extra** time to **go back through unfinished questions** and use the strategies developed above.
- **In grade one** and **two** students may work on the same sheet (adding on one side, subtraction on the reverse) over a whole week.
- **In grade three** and **early grade four** students may work on the same sheet (multiplying on one side, dividing on the reverse) over a whole week.
- **Students should be evaluated** once per month in each operation they have been studying or in any operation they have mastered. [\[Click icon for 'Mastery Certificates'\]](#)
- **In grade four, five** and **six** the adding and subtracting facts do not need to be evaluated monthly, except for a few struggling students.
